SANS ISC publishes its daily Stormcast for 20 November 2026

SANS Internet Storm Center released its daily Stormcast podcast episode for Friday, 20 November 2026. The source entry gives no topic details, so no specific threat or action can be drawn from it.

- SANS Internet Storm Center issued its Stormcast episode for Friday, 20 November 2026.
- The episode is listed as number 10188 on the ISC podcast site.
- The source entry contains only the title and a licence notice, with no summary of topics.
- No vulnerabilities, incidents or recommended measures are stated in the source.

What was published

The SANS Internet Storm Center (ISC) has posted its Stormcast podcast episode for Friday, 20 November 2026. The episode is listed under number 10188 on the ISC podcast site. Stormcast is the centre's regular daily audio update.

What the source does not tell us

The entry we reviewed consists only of the episode title, a link and a copyright and licence notice. It does not describe the topics covered, and it names no vulnerability, campaign, vendor or affected product. For that reason we are not drawing any conclusions about threats or required action from it.

How to use it

Security teams that already follow the ISC daily feed can listen to the episode or read the associated diary entries to see what the analysts highlighted that day. Teams that do not follow it may consider adding it as one of several external sources feeding their daily threat-awareness routine, assessed against their own asset inventory and the obligations that apply to their institution.

We will report separately if specific items from this episode prove relevant to institutions in the Kingdom.
